

ormCheck Yearly Worm Management

Managing worms should be based on disrupting their lifecycle; stopping eggs from growing into infective larvae. Management of horse worms can be done via:

- Manure collection and composting in cold months
- Harrowing in hot, dry weather
- FECs and targeted deworming

Visit the WormCheck website for more info and resources

FEC all horses; deworm as per FEC results

Collect and compost manure

Conduct a FECRT if you change dewormer

FEC young horses and high shedders

Collect and compost manure

FEC young horses and high shedders

Harrow paddocks

Avoid unnecessary treatments to protect dung beetles

FEC all horses

Treat all horses with an avermectin for strongyles and bot flies

Conduct FECRT for drug efficacy

Collect and compost manure
